## What is Space Weather?

*“conditions on the sun and in the solar wind, magnetosphere, ionosphere, and thermosphere that can influence the performance and reliability of space-borne and ground-based technological systems and can endanger human life or health”*

[US National Space Weather Programme]

## What is Space Weather?

*“conditions on the sun and in the solar wind, magnetosphere, ionosphere, and thermosphere that can influence the performance and reliability of space-borne and ground-based technological systems and can endanger human life or health”*

## Effects

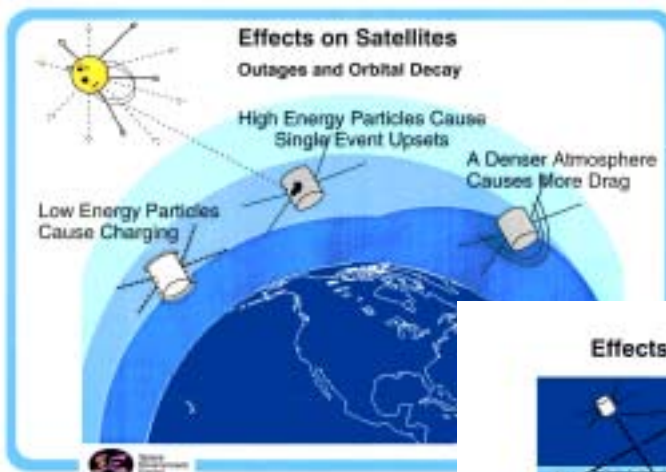

- Satellites affected by radiation, plasma, atmosphere, particulates;
- Astronauts - ISS, future exploration missions;
- Radiation hazards to air crew and avionics;
- Ground power outages from currents induced in lines;
- Disruption to communications relying on the ionosphere;
- Disruption of navigation satellite signals (GPS - Galileo);
- Prospecting;
- Climate;
- see [www.esa.int/spaceweather](http://www.esa.int/spaceweather)

## Spacecraft Charging

Many satellites experience “anomalies” which usually do not lead to satellite loss

## Assets in Space - Satellite Insurance

- Total value of more than 600 satellites currently in orbit is about \$50-100 billion
  - 235 of these are insured (value: \$20 billion)
- Growing market: 1500 space payloads are expected to be launched the next 10 years
  - potential insured value \$80 billion

This charts shows total claims, not only space weather related

Estimated \$500 million in damages due to space weather last 4 years

## Quebec Power Outage 1989 caused by a "super" geomagnetic storm

### Damage to transformers

Damage to a transformer at a power plant Delaware, New Jersey i march 1989.

Price: 10 M\$

Repair can take up to 1 year.

In this particular case they were lucky to find a used one from a shut down plant. Took only 6 weeks to restore

(Some estimate that total impact of such an event in US in future could reach 3-6B\$)

Sweden: simultaneous power loss in six 130 kV power distribution lines

Chicago: Five transformers in the Chicago area failed due to elevated geomagnetic activity in April 94

## Not a New Problem!

### *In a telegraph system in 1849:*

W.H. Barlow,

**"On spontaneous electrical currents observed in the wires of the electric telegraph", *Phil. Trans. R. Soc.*, 61, 1849:**

**"The observations described... were undertaken in consequence of certain spontaneous deflections having been noticed in the needles of the electric telegraph on the Midland Railway, the erection of which was carried out under my superintendence as the Company's engineer."**

**"... in every case which has come under my observation, the telegraph needles have been deflected whenever aurora has been visible"**

36

# Climate Changes?

Probably the most recent example of large social disruption of cosmic origin is the 70 year-long European Mini-Ice Age during the "Maunder minimum" of 1645-1715.

Parker : "We know from observations of a few sun-like stars that one of them lost 0.4% of its luminosity in only a few years. If the Sun did that, it could quickly reproduce the cold conditions of 300 years ago..."

## Who Will Notice Increased Activity?

- More than 25 space walks a year
- \$9 Billion/year in GPS sales by 2000
- \$30 Billion of additional satellites

### Astronauts

Space Station Construction Occurs During Peak of Solar Activity

### Communications

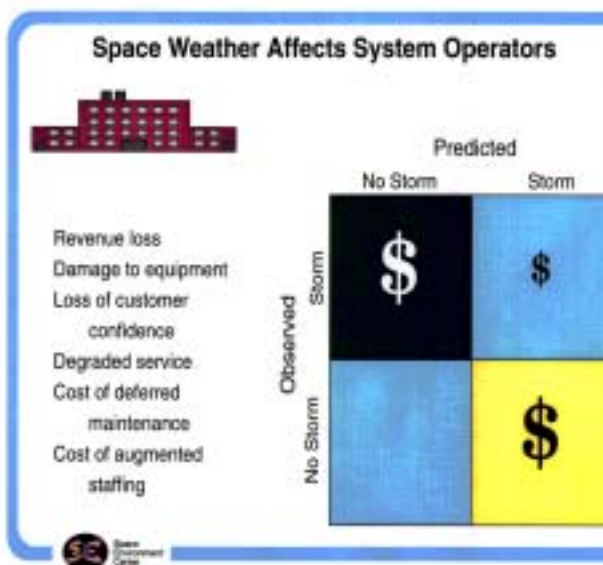

### Navigation

Space  
Environment  
Center

e

## Future...

- More sensitive technologies in space (hundreds of satellites will become thousands)
- More use of space as part of the social infrastructure (e.g. navigation, observation, communications, defence)
- More aircraft issues
- New groups affected (prospecting, ...)
- Growing user community with a growing set of user requirements...

## Space Weather Services

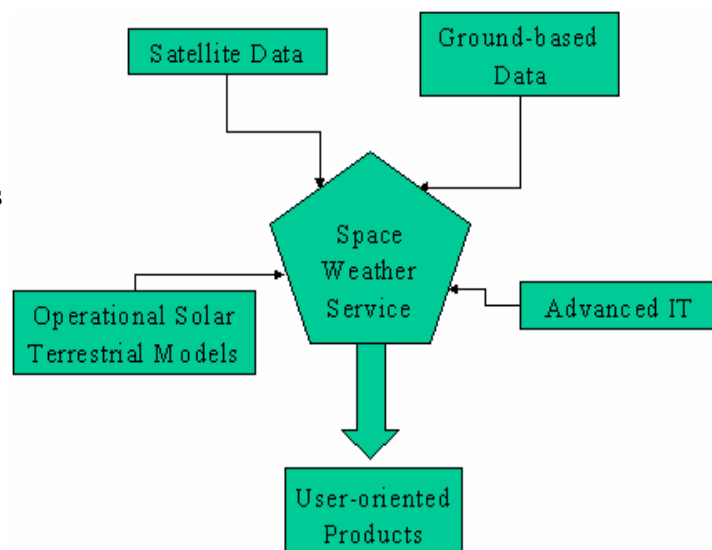

- Measurement Needs
- Data and Models

## Background

- Effects are an increasing problem;
- Service providers provide supporting to users;
- Space Science provides:
  - Data and expertise to help protect systems affected (*the spacecraft that provide warnings are often science missions*);
  - Foundations of improved ability to understand & predict (ESA, NASA and others are working on important space physics research and applications developments);
- There are movements towards dedicated “Space Weather Services”

## What is a Space Weather Service?

- *provides end-users in the affected sectors with tailored products to avoid or reduce space weather hazards through design or operation.*
- Data & services which can be provided are already proving valuable in certain sectors (e.g. power grids, communication, defence, spacecraft)
- A space weather service federates ground and space based measurement of the solar-terrestrial environment, not to perform science, but to derive products.
- A service includes advanced data processing and information technologies to exploit data and execute simulations of the space weather systems.

## Data and Models

- Space weather covers a wide spatial range,  
so sources of data are wide-ranging:
  - Ground-based
  - Space-based

## Ground-based sources of near real time data

## Space-based Sources of Near-Real Time Data

## Models

- Solar wind disturbances & ICME propagation
- Magnetospheric dynamics
- Ionospheric dynamics
- Thermospheric
- ...

## Simulation of Solar Wind Shock Propagation

Produced by Angels Aran and Blai Sanahuja of University of Barcelona  
and David Lario of Johns Hopkins University

53

## Space Weather Missions

- Mostly scientific in nature
- Some studies have been made of feasibility and requirements for Applications missions

23 July 2002

Alpbach Summer School -Daly 1-

54

## International Context

- US:
  - NASA Science: (International) Living with a Star programme and other solar-terrestrial programmes;
  - NOAA Space Environment Centre and Data system
  - NASA Manned Programme
  - Department of Defence
- ESA/Europe
  - Space Science Missions (SOHO, Solar Orbiter, +)
  - National science missions; national technology missions;
  - Space Weather Applications Pilot Project
- Japan:
  - Study of an “L5” mission + others
- Other nations are active
- A coordinated world approach is the natural way forward

23 July 2002

Alpbach Summer School -Daly 1-

55

## “ NASA Living with a Star” Programme

56

## ESA's Solar Orbiter (2010+)

Near-sun studies of  
the sun and solar wind

23 July 2002

Alpbach Summer School -Daly 1-

57

## European Strengths

- Space Science (solar, S-T) programmes
- Established space environments and effects community (monitors, models, tools,...)
- Ground-based effects (comms/nav, GIC): much activity; some services; recognition of needs;
- Ground based measurements
- Data systems/IT and modelling
- Space Industries
- Many efforts at national and European levels

23 July 2002

Alpbach Summer School -Daly 1-

58

## ***Conclusions***

- Scientific investigation of the solar-terrestrial system continues to be an important venture;
- Increasing sensitivity of technologies and society to space weather requires “services”;
- Your task:      design a service  
                              (you decide what for)
- Your tools:      the lectures + your initiative
- The output:     a final presentation
