

# What's next in Solar Weather Monitoring, Modelling and Forecasting ?

M. Messerotti<sup>1</sup> and H. Lundstedt<sup>2</sup>

<sup>1</sup>INAF-Trieste Astronomical Observatory, Trieste, Italy

<sup>2</sup>Swedish Institute of Space Physics, Lund, Sweden

1st European Space Weather Week 29 Nov-3 Dec. 2004, ESA ESTEC  
StoA 5: Solar Weather / Solar Activity Forecast and Predictions  
1 December 2004

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

## Scheme of the Talk

- A. SPACE METEOROLOGY ONTOLOGY
- B. THE MONITORING SCENARIO
- C. THE MODELLING SCENARIO
- D. THE FORECASTING SCENARIO
- E. SOLAR WEATHER VISIONS

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

2

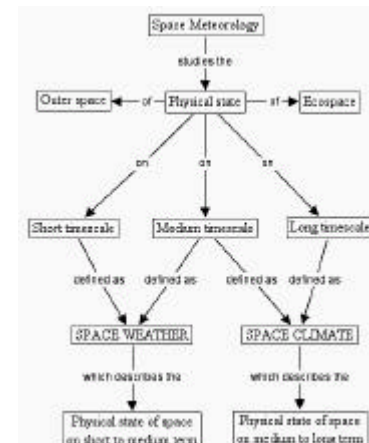

## A. SPACE METEOROLOGY ONTOLOGY

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

3

## Ontology of Space Meteorology

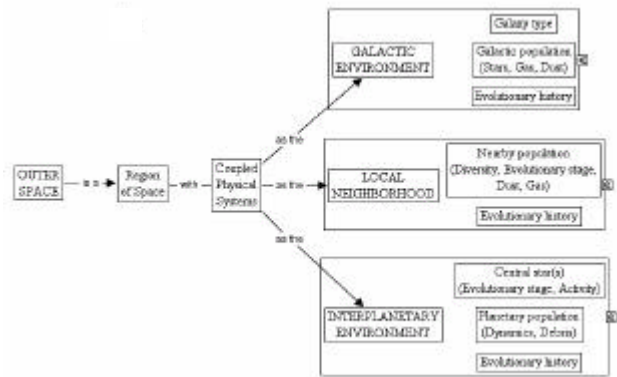

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

4

## The Outer Space Environment

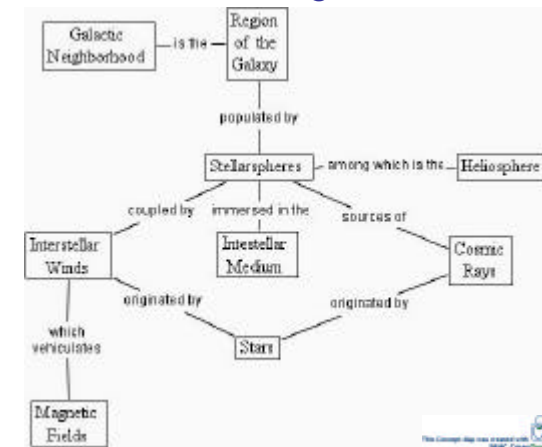

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

5

## The Galactic Neighborhood

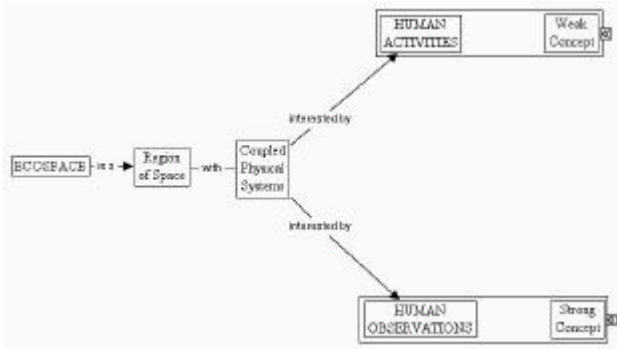

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

6

## The Ecospace

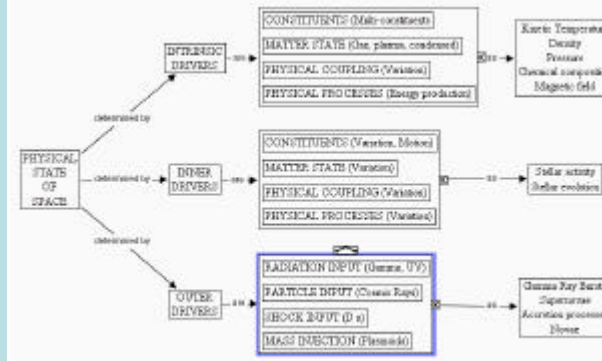

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

7

## Physical State of Space

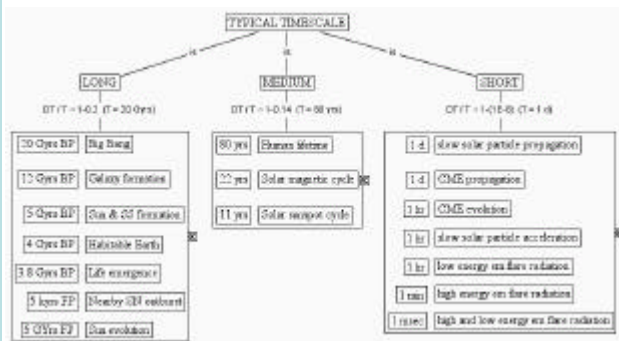

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

8

## Phenomenological Timescales

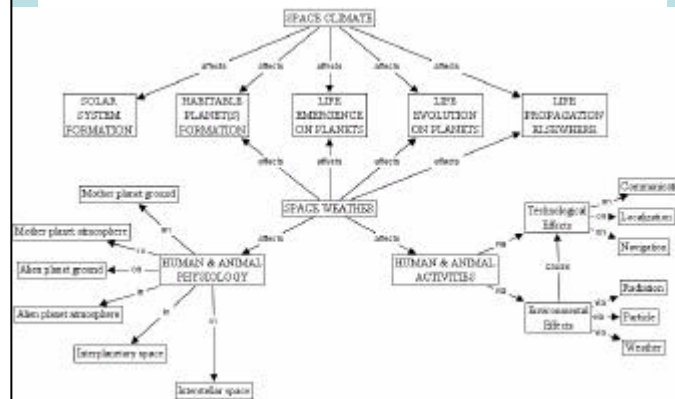

1st ESSW, 1st Dec, 2004

M. Messerotti & H. Lundstedt

9

## Space Conditions Impacts

1st ESSW, 1st Dec, 2004

M. Messerotti & H. Lundstedt

10

## B. THE MONITORING SCENARIO

1st ESSW, 1st Dec, 2004

M. Messerotti & H. Lundstedt

11

## Monitoring Scenario: The Pros

- SOLAR WEATHER MONITORS
  - Radiation & particles
    - Space-based detection (e.g. SOHO)
    - Ground-based detection (many instruments)
  - Monitored phenomenology
    - Inner plasma
    - Photospheric plasma
    - Chromospheric plasma
    - Coronal plasma
    - Extended coronal plasma

1st ESSW, 1st Dec, 2004

M. Messerotti & H. Lundstedt

12

## Monitoring Scenario: The Cons

- SPACE-\* and GROUND-BASED MONITORS
  - INCOMPLETENESS in
    - Phenomenology coverage
    - Spatial coverage
    - Temporal coverage
    - Energy coverage
  - MOSTLY NON-REAL-TIME OPERATIONS
  - LIMITATIONS IN TELEMETRY\*
  - UNGUARANTEED MISSION\*/OPERATION CONTINUITY
  - LIMITED MISSION\*/OPERATION DURATION
  - MISSION\*/INSTRUMENTATION DESIGN DRIVEN BY “ALCHEMIC POLITICAL” CONSTRAINTS

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

13

## Monitoring Scenario: The Data Issues

- COMMON TO SPACE- AND GROUND-BASED MONITORS:
  - HUGE NUMBER OF DATA SETS
  - LARGE NUMBER OF DATA STANDARDS
  - LIMITED DATA AVAILABILITY
  - NON-REAL-TIME AVAILABILITY
  - LIMITED DATA ACCESSIBILITY
  - NON-USER-FRIENDLY SEARCH AND RETRIEVAL
  - DIFFICULT DATA CALIBRATION
  - COMPLEX DATA ANALYSIS
  - LIMITED CROSS-DATA AN.
- POSSIBLE SOLUTIONS TO MOST ISSUES:
  - NONE: WILL INCREASE TO PBs
  - COORDINATION ON COMMON STANDARDS
  - AGREEMENT ON DATA POLICIES
  - DEVELOPMENT OF VIRTUAL MONITORS
  - IMPROVEMENT IN WEB ACCESSIBILITY
  - ADVANCED DATA HANDLING
  - INCORPORATION OF SW LIBRARIES
  - DEVELOPMENT OF VIRTUAL OBSERVATORIES

HS NETWORKING, HPC, I-GRID

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

14

Development of  
VIRTUAL MONITORS

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

15

## An Advanced System for Data Handling in SPW

STEV  
Solar-Terrestrial Environment Virtual Monitor

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

16

## The Solar-Terrestrial Data Planetary Meta-Archive

### Solar and Geophysical Databases: the Tiles of a Planetary Meta-archive

M. Messerotti

#### Abstract

In the frame of solar-terrestrial physics and the related space weather applications, a brief overview is given on the available resources to access solar, interplanetary, geospace and geophysical data, with special emphasis on the creation of a Solar-Terrestrial Data Planetary Meta-Archive (STDPMA) to exploit their full potentialities as a huge, inhomogeneous, distributed dataset in a user-transparent way by means of the new technologies in database management and user interface design.

#### Reference

Edited by A. Wilson. Noordwijk, Netherlands: ESA Publications Division, 2000 xi, 680 p. ESA SP, Vol. 463, ISBN 9290926937, p. 563

## Space Weather as Driver of Data Homogeneization

- Inhomogeneous and fragmented character of available observations

### CAUSES

Difficulties in carrying out a posteriori modelling of complex phenomena

- These limitations are intrinsic to data acquisition mode

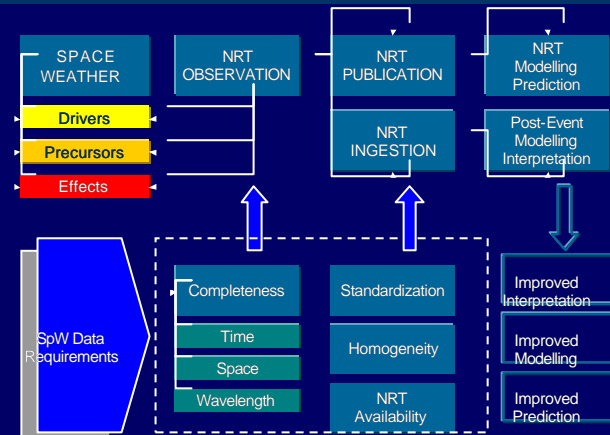

### HENCE

Even advanced data search by Grid architectures cannot overcome

## DRAWBACKS OF DATA INADEQUACY

- The outcomes are:
  - Inadequate modelling
  - Limited to a subset of phenomenological and physical aspects
  - Often neglects the complex interplays among different processes

## Scheme of SpW Data Requirements

## The Role of Observing Requirements for SpW

Observing requirements for SpW and SpW drivers observation in monitoring and nowcasting can play a primary role in providing:

1. homogeneization in observations
2. near real-time data ingestion in archives
3. unified data access via web through a user friendly GUI

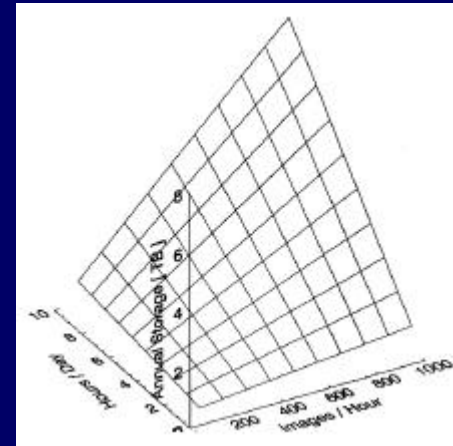

capable to facilitate:

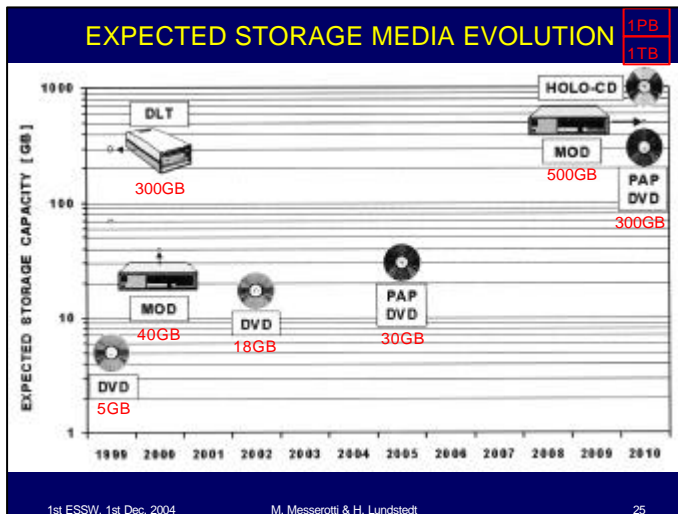

1. data availability in near real-time
2. full exploitation of the data information content by pointing out interrelationships in different datasets
3. self-consistent modelling

## Development of VIRTUAL OBSERVATORIES

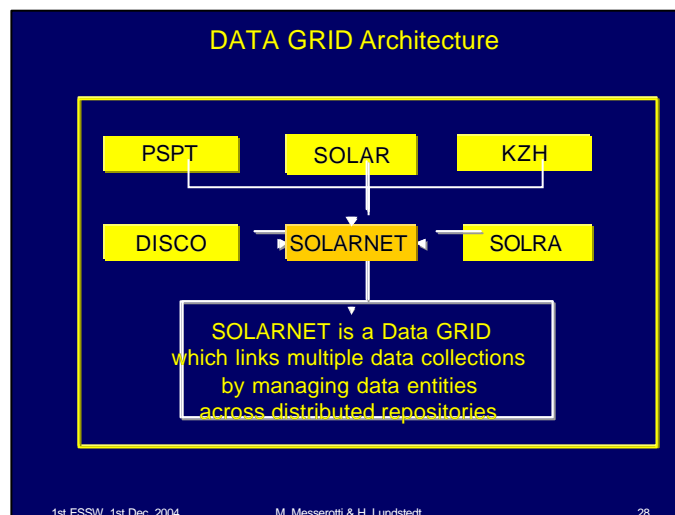

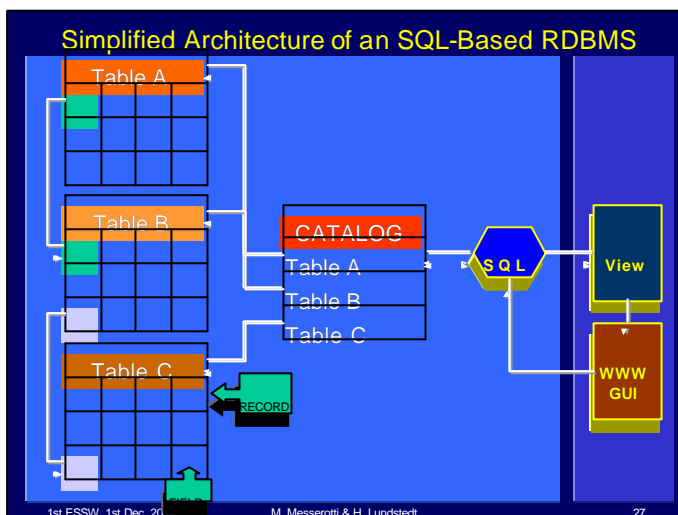

## Advances in Solar and Solar-Terrestrial Data Archiving and Retrieval Techniques

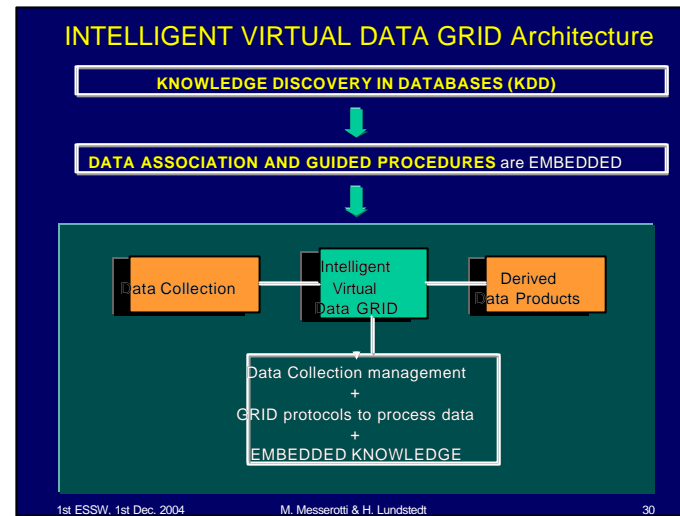

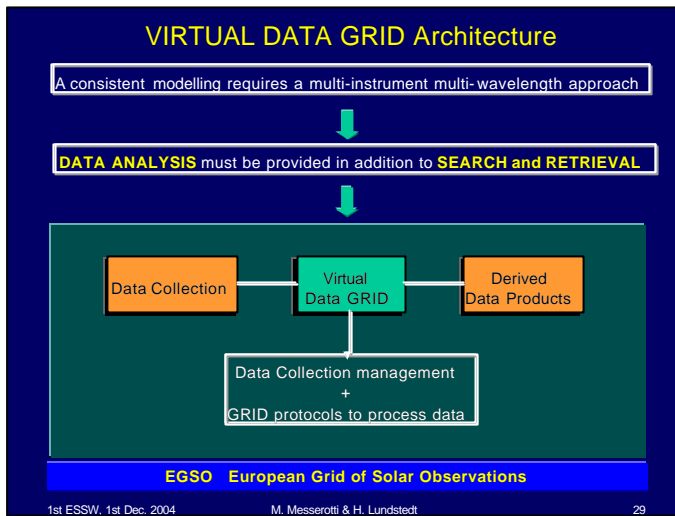

## LOW-END ANNUAL DATA STORAGE VOLUME

- ### BASIC CONSIDERATIONS
- Solar space and ground-based observatories operate
    - set of instruments which operate at different wavelengths and produce inhomogeneous 1-, 2-, 3-, 4-D datasets
  - Many solar archives exist all over the world
  - Modern archiving techniques allow
    - efficient data search and retrieval through a Relational Data Base Management onsite or in a distributed environment
- 1st ESSW, 1st Dec. 2004 M. Messerotti & H. Lundstedt 26

### DATA ORGANIZATION

• Matter of Fact	Huge amount of space and g-b data
• Data Storage	Magnetic, Magneto-Optical, Optical Media
• Data Organization	Databases, Archives, Meta-Archives
• Data Indexing	Tables, Catalogs managed by RDBMS
• Data Access	FTP, TELNET, WWW via GUI
• Data Search	Local, Distributed over the net
• Data Analysis	Local

1st ESSW, 1st Dec. 2004 M. Messerotti & H. Lundstedt 31

- ### SCIENTIFIC REQUIREMENTS
- a) Physical modelling
    1. MULTIWAVELENGTH DATA SEARCH
    2. MULTIWAVELENGTH DATA DISPLAY
    3. MULTIWAVELENGTH DATA ANALYSIS

via a common unified, user-friendly interface
  - b) Space Weather
    1. SOLAR, SPACE, EARTH DATASETS
    2. MULTI-EVENT MODELLING
    3. LARGEST COVERAGE POSSIBLE
  - c) Event Prediction
    1. CROSS-SEARCH OVER ARCHIVES
    2. DISTRIBUTED STATISTICAL ANALYSES
    3. REAL-TIME DATA AVAILABILITY
- 1st ESSW, 1st Dec. 2004 M. Messerotti & H. Lundstedt 32

## SCIENTIFIC MOTIVATIONS

- Some major Solar -Terrestrial Data Portals exist
- Mainly Resource Indexing is available
- Few resources partially allow complex, distributed data searching over limited subsets of databases
- Very few resources partially allow data analysis on inhomogeneous datasets

A PLANETARY META-ARCHIVE IS NEEDED TO EXPLOIT THE FULL SCIENTIFIC POTENTIALITIES OF MULTI-WAVELENGTH MODELLING IN SOLAR-TERRESTRIAL PHYSICS

## GOALS

1. Index observational resources in S-T Physics
2. Index theoretical resources in S-T Physics
3. Allow
  - User-transparent data access to distributed datasets all over the world
  - Complex data searching, retrieval and analysis via a simplified common GUI

PRESENT DATA ARCHIVING TECHNOLOGIES ALLOW THE ACHIEVEMENT OF SUCH GOALS PROVIDED THAT A GLOBAL COORDINATION AND COLLABORATION IS ESTABLISHED AS WELL AS THE ALLOCATION OF PROPER FINANCIAL RESOURCES BY THE PARTICIPATING ORGANIZATIONS

## ADVANCED GOAL

- Pointing out the physical associations in multi-wavelength datasets is the basis of interpretative scientific research
- Concept association is the kernel of knowledge
- Automated storage and search of knowledge in databases is possible through advanced techniques and is called  
**Knowledge Discovery in Databases (KDD)**
- Advanced techniques are based on Artificial Intelligence (AI) and Expert Systems (ES) embedding

THE EMBEDDING OF AI-ES TECHNIQUES IN THE GRID ARCHITECTURE REPRESENTS THE NEXT GENERATION IN DATA SEARCH, RETRIEVAL, PROCESSING AND ANALYZING

## C. THE MODELLING SCENARIO

## Modelling Scenario: **The Cons**

- NO SELF-CONSISTENT THEORY for:
  - AR formation & evolution
  - FLARE triggering, acceleration, radiation
  - PROMINENCE formation & eruption
  - CME generation & propagation
  - CME plasmoid structure and magnetic field
  - SLOW SW generation, evolution & topology
  - FAST SW generation, evolution & topology
  - IP MAGNETIC FIELD topology
  - INTERACTION with GMF

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

37

## D. THE FORECASTING SCENARIO

1st ESSW, 1st Dec. 2004

M. Messerotti & H. Lundstedt

38

## Forecasting Scenario: **The Cons**

- LIMITED RESULTS for:
  - AR formation & evolution
    - Expert Systems based on a posteriori modelling
  - FLARE occurrence & class
    - Statistical methods based on precursors & SOC
    - Mainly nowcasting
  - CME formation & evolution
    - Statistical methods based on precursors
    - Mainly nowcasting
- STATE-OF-THE-ART based on hybrid approach , involving AI TECHNIQUES
- **MAIN ISSUE is LACK of SCIENTIFIC KNOWLEDGE on the PHYSICS**

1st ESSW, 1st Dec. 2004

1st ESSW, 1st Dec, 2004

M. Messerotti & H. Lundstedt

64

## Transferring a Differential Equation to a Difference Equation and Then Comparing With a Recurrent Neural Network

The solar wind-magnetosphere coupling

$$\frac{dDst^*}{dt} = Q - \lambda Dst^*$$

$$Dst = (10p - 10) \quad (8)$$

The normalization transform  $\tilde{D}_i \in [-30, +30]$  a.T.,  $\tilde{v} \in [-200, +200]$  m.e.T.,  $\tilde{v} \in [-200, +200]$  km/s, and  $\tilde{D}_{st} \in [-200, +200]$  a.T. in the  $[-1, +1]$  interval.

The output from the network is described by the following equations

$$x_i(t+1) = \tanh\left(\sum_{j=1}^n w_{ij}^1 x_j(t) + \sum_{j=1}^n w_{ij}^2 v_j(t) + v_i^0\right) \quad (9)$$

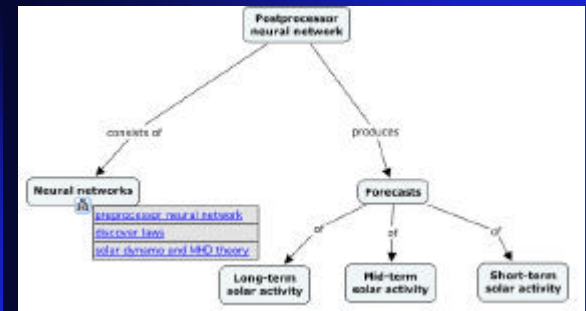

$$y(t+1) = \sum_{i=1}^n w_{oi} x_i(t) + v^0 \quad (10)$$

$$\frac{d\Phi_{II}}{dt} = \gamma E - \frac{\Phi_{II}}{\tau_0}$$

Open solar flux, where E is the flux emergence rate  
 $\tau$  is decay time scale

1st ESSW, 1st Dec, 2004 M. Messori & H. Lundstedt 65

## Forecasts

## Forecasting Cycle 24

**Solar Cycle 24**

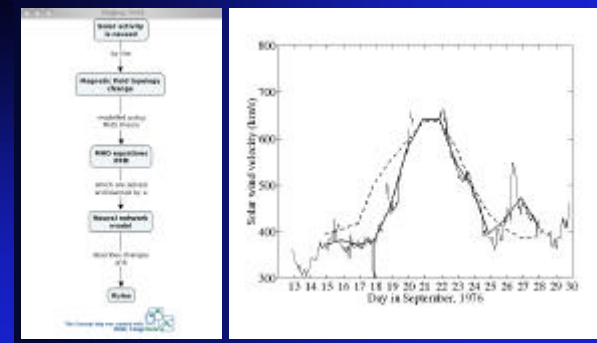

Objective: To develop forecasts of solar cycle 24 based on physics-based neural networks.

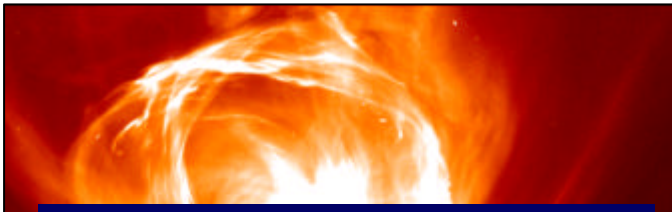

Forecast results:

- Long-term solar activity (index)
- Mid-term solar activity (index)
- Short-term solar activity (index)

1st ESSW, 1st Dec, 2004 M. Messori & H. Lundstedt 67

## Forecast of Solar Wind Velocity Using a RBF Network and the Expansion Factor Calculated Using a PFM

## E. SOLAR WEATHER VISIONS

1st ESSW, 1st Dec. 2004 69

## SOLAR WEATHER VISIONS

- Improved knowledge of
  - Physics of solar activity processes
  - Propagation & coupling
  - Precursors, timings & occurrence frequencies
- Complete global network of space- & ground-based real-time observations
- Solar-Terrestrial Virtual Monitor I-Grid
- Geospace models fully incorporate Solar Weather key parameters
